

*AMENDMENTS TO THE ABSTRACT*

Replace the Abstract with:

The method ~~for~~of glossing a solid surface by forming a film thereon has the steps of: preparing a film-forming coating liquid containing at least an isocyanate compound having two or more isocyanate groups, a synthetic resin having a functional group which reacts with the isocyanate group, and an organic solvent; coating the film-forming coating liquid onto the solid surface; and ~~film-forming~~forming a film on the solid surface after ~~the step of~~ coating. The ~~coating-weight~~ of the film-forming coating liquid is adjusted ~~in the step of~~during coating so ~~as the film thickness that~~ after the ~~step of film-forming to become a range~~film is formed, the film has a thickness from 0.1 to 5  $\mu\text{m}$ .
